

What Should Families Know?

Most people believe that mental disorders are rare and “happen to someone else.” In fact, mental disorders are common and widespread. An estimated 54 million Americans suffer from some form of mental disorder in a given year. Most families are not prepared to cope with learning their loved one has a mental illness. It can be physically and emotionally trying, and can make us feel vulnerable to the opinions and judgments of others. If you think you or someone you know may have a mental or emotional problem, it is important to remember there is hope and help.

What is mental illness?

A mental illness is a disease that causes mild to severe disturbances in thought and/or behavior, resulting in an inability to cope with life’s ordinary demands and routines. There are more than 200 classified forms of mental illness. Some of the more common disorders are depression, bipolar disorder, dementia, schizophrenia and anxiety disorders. Symptoms may include changes in mood, personality, personal habits and/or social withdrawal. Mental health problems may be related to excessive stress due to a particular situation or series of events. As with cancer, diabetes and heart disease, mental illnesses have physical as well as emotional and psychological symptoms. Mental illnesses may be caused by a reaction to environmental stresses, genetic factors, biochemical imbalances, or a combination of these. With proper care and treatment many individuals learn to cope or recover from a mental illness or emotional disorder.

How to cope day-to-day

Accept your feelings

Despite the different symptoms and types of mental illnesses, many families who have a loved one with mental illness, share similar experiences. You may find yourself denying the warning signs, worrying what other people will think because of the stigma, or wondering what caused your loved one to become ill. Accept that these feelings are normal and common among families going through similar situations. Find out all you can about your loved one’s illness by reading and talking with mental health professionals. Share what you have learned with others.

Handling unusual behavior

The outward signs of a mental illness are often behavioral. Individuals may be extremely quiet or withdrawn. Conversely, he or she may burst into tears or have outbursts of anger. When in public, these behaviors can be disruptive and difficult to accept. The next time you and your family member visit your doctor or mental health professional, discuss these behaviors and develop a strategy for coping.

Establishing a support network

Whenever possible, seek support from friends and family members. If you feel you cannot discuss your situation with friends or other family members, find a self-help or support group. These groups provide an opportunity for you to talk to other people who are experiencing the same type of problems. They can listen and offer valuable advice. For example, you can click the following link for a free, 12-week course for family caregivers of individuals with severe mental illnesses:

Seeking counseling

Therapy can be beneficial for both the individual with mental illness and other family members. A mental health professional can suggest ways to cope and better understand your loved one’s illness. When looking for a therapist, be patient and talk to a few professionals so you can choose the person that is right for you and your family. It may take time until you are comfortable, but in the long run you will be glad you sought help.

Taking time out

It is common for the person with the mental illness to become the focus of family life. When this happens, other members of the family may feel ignored or resentful. Some may find it difficult to pursue their own interests. If you are the caregiver, *you* need some time for yourself. Schedule time away *to prevent* becoming frustrated or angry. If you schedule time for yourself it will help you to keep things in perspective and you may have more patience and compassion for coping or helping your loved one. Only when you are physically and emotionally healthy can you help others. It is important to remember that there is hope for recovery and that with treatment many people with mental illness return to a productive and fulfilling life.
