

Why study this intersection?

- Creating safe and well-operating intersections is a top priority for Lake County. Congestion results in driver frustration and can contribute to crashes.
- Based on a review of crash data and traffic demand, the Fairfield Road / Monaville Road intersection has been identified for possible improvements.

What was studied and what is proposed?

- This study took an in-depth look at the current and future needs at this intersection and developed solutions to improve safety and traffic operations.
- The preferred alternative is a result of engineering studies, public outreach, and coordination with the Stakeholder Involvement Group and IDOT. Details regarding the preferred alternative are presented at this meeting.
