*For questions regarding influenza and what is reportable to the Lake County Health Department, contact the Communicable Disease (CD) Program at (847) 377-8130*

---

## What is Influenza?

The Centers for Disease Control and Prevention (CDC) defines influenza (flu) as a contagious respiratory illness caused by influenza viruses. It can cause mild to severe illness. Serious outcomes of flu infection can result in hospitalization or death. Some people, such as older people, young children, and people with certain health conditions, are at high risk for serious flu complications. The best way to prevent the flu is by getting vaccinated against the flu, each year.

## Weekly Summary

Geographic Area	Flu/Influenza-Like Illness (ILI) Activity
<b>Lake County</b>	<ul style="list-style-type: none"> <li>Visits for Upper Respiratory Illness/Influenza-like-illness (ILI) at LCHD Clinics increased by 17% over the previous week.</li> <li>Lake County Schools: <b>School ILI Surveillance reporting will begin in the near future</b></li> </ul>
<b>Cook County</b>	<b>Flu/ILI Activity is currently: LOW (Week 43).</b>
<b>Wisconsin (Southeast Region)</b>	Flu/ILI Activity is currently: <b>LOW (Week 43).</b>
<b>Illinois</b>	Flu/ILI Activity is currently: <b>LOW (Week 43).</b>
<b>United States</b>	Flu/ILI Activity is currently: <b>LOW (Week 43).</b> Based on ILINet and most states falling into this category.

*Note: Our report contains different flu weeks for some geographic areas due to different reporting dates of sources.*

---

*The 2016-17 U.S. Three component (Trivalent) influenza vaccine contains: A/California/7/2009 (H1N1) pdm09-like virus, A/ Hong Kong/4801/2014 (H3N2)-like virus, and a B/Brisbane/60/2008-like virus (B/Victoria lineage).*

*The 4 component (Quadrivalent) influenza vaccine will also include a B/Phuket/3073/2013- like virus (B/Yamagata lineage) for this year's flu season.*

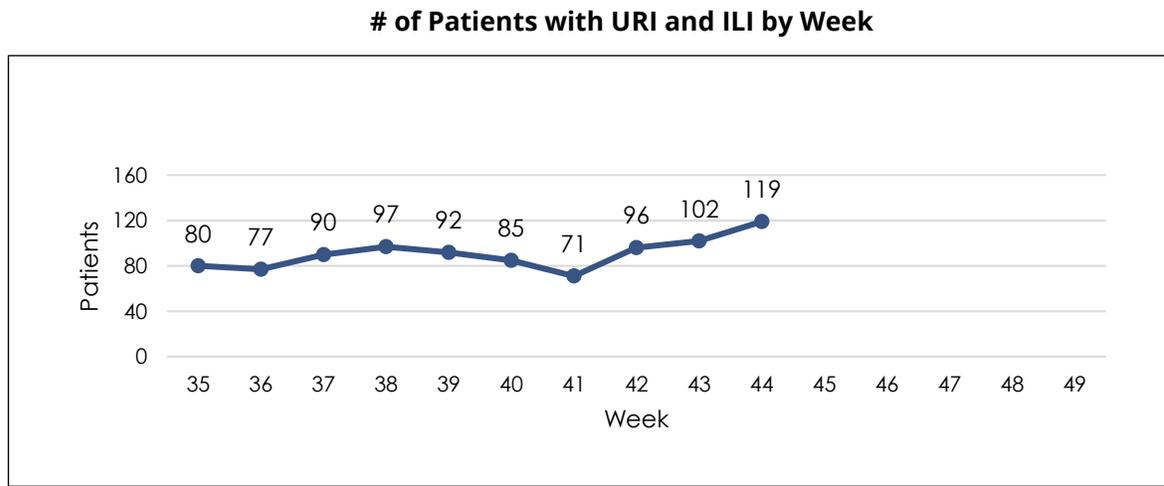

---

The Centers for Disease Control and Surveillance (CDC) have classified flu/Influenza-Like-Illness (ILI) activity levels as minimal (levels 1-3), **Low (levels 4-5)**, **Moderate (levels 6-7)**, and **High (levels 8-10)**. This classification helps in summarizing weekly flu/ILI surveillance information for a geographic area and making flu/ILI activity easier to interpret.

### County Data

#### LCHD/CHC (Federally Qualified Health Center): [Week 44 \(29 Oct – 04 Nov 17\)](#)

Visits to the Lake County Health Departments Community Health Center clinics (LCHD/CHC), for both upper respiratory infections (URI), and/or influenza-like-illness (ILI), are edging up with a 17% increase over the previous week.

Source: Lake County Health Department Electronic Health Records, 2017.

#### Reportable to the Lake County Health Department: [Week 44 \(29 Oct – 04 Nov 17\)](#)

Quick Stats	Week 44	Prior Week	Cumulative*
<b>Flu - Intensive care unit (ICU) admissions</b>	0	0	0
<b>Flu - Pediatric Deaths (0-18)</b>	0	0	0
<b>Flu - Outbreaks reported (Congregate settings) **</b>	0	0	0

Source: Illinois' National Electronic Disease Surveillance System (I-NEDSS)

\*Cumulative since week 35. Single positive flu tests are not reportable in Illinois.

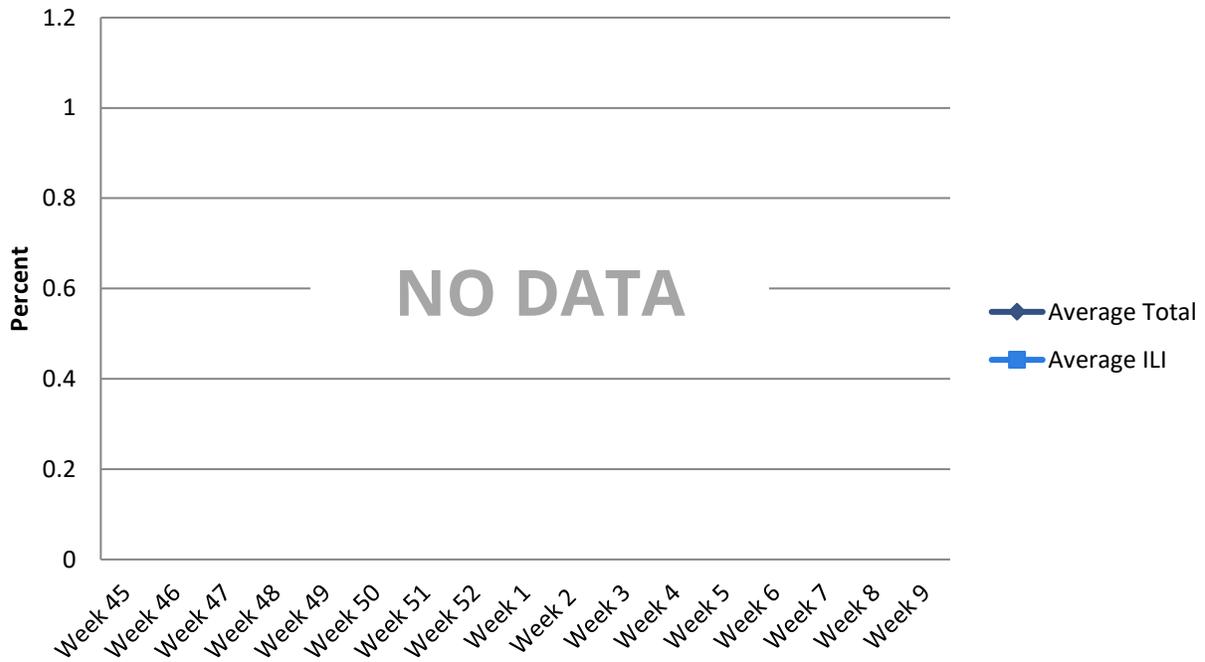

\*\*Correctional, Long Term Care (LTC) Facilities, group homes and Hospitals.

**School Influenza-Like Activity Surveillance: \*Week 44 (29 Oct – 04 Nov 17)**

Reporting School Districts: \*School ILI Surveillance reporting will begin in the near future

Quick Stats	Current Week	Previous Week
Schools tracking and reporting absenteeism data	No Data	No Data
Schools reporting ILI absenteeism ( $\geq 5\%$ )	No Data	No Data
Schools/Pre-schools reporting general absenteeism ( $\geq 10\%$ )	No Data	No Data

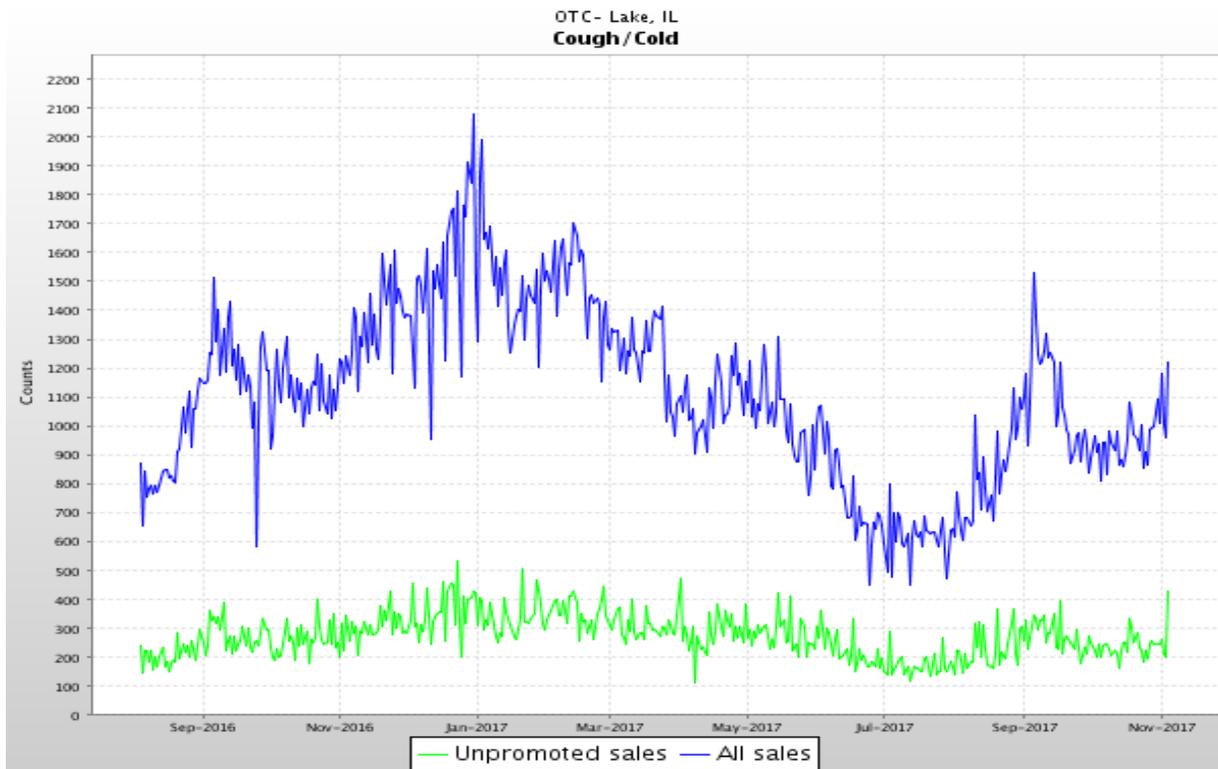

**\*Average % Absenteeism and Influenza-like-Illness (ILI)  
Lake County Schools (2017-18)**

Source: Lake County Schools 2017-2018

**Sentinel Pharmacies: Past 15 months (05 Aug 16 – 04 Nov 17)**

There are 71 pharmacies in Lake County who report the sales amount of over-the-counter (OTC) cough and cold medications for Upper Respiratory Infections. This report includes “All Sales” which refers to all cough and cold medicines that were sold in total, as well as “Un-promoted Sales”, which are cough and cold medicines not promoted but sold.

## State Data

**Illinois: Week 43 (22 – 28 Oct 17)**

Current Week Quick Stats		
Illinois Influenza Geographical Spread	Sporadic (see flu activity chart below for definition)	
Percent of outpatient visits for ILI	0.93% ( <b>baseline: 1.80%</b> )	
Percent of Influenza Positive Tests	Current Week: 1.0%	Season: 1.3%
Influenza-Associated ICU Admissions	Current Week: 2	Season: 10
Influenza Outbreaks	Current Week: 0	Season: 1
Influenza Associated Pediatric Deaths (Season Total)	0	

Source: Illinois Department of Public Health, Influenza Surveillance, 2017-2018.

### Illinois Department of Public Health (IDPH) Flu Activity Rating by Geographical Spread

<b>No Activity</b>	No laboratory confirmed cases of influenza.
<b>Sporadic Activity</b>	Isolated lab-confirmed cases <u>OR</u> lab confirmed outbreak in one institution.
<b>Local Activity</b>	Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI <u>OR</u> recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions.
<b>Regional Activity</b>	Increased ILI in > 2 but less than half of the regions <u>AND</u> recent (within the past 3 weeks) lab confirmed influenza in affected regions. <u>OR</u> institutional outbreaks (ILI or lab confirmed) in > 2 and less than half or regions <u>AND</u> recent lab confirmed influenza in affected regions. A region is defined as the regions States use for public health purposes.
<b>Widespread Activity</b>	Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions <u>AND</u> recent (within the past weeks) lab confirmed influenza in the state.

## National Data

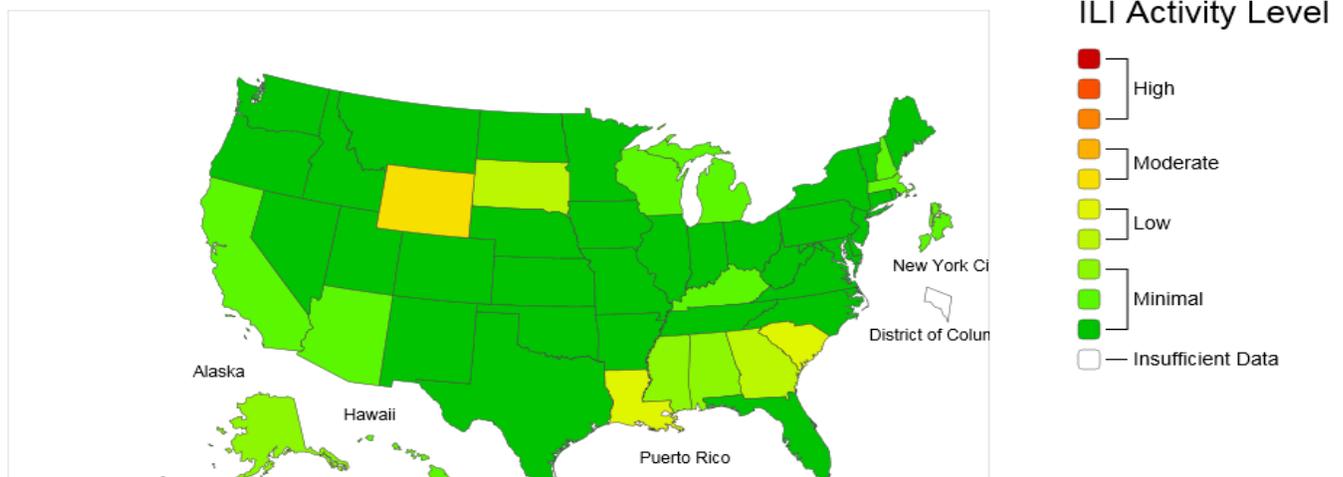

Center for Disease Control and Prevention (CDC): [Week 43 \(22 – 28 Oct 17\)](#)

Flu/Influenza-Like Illness (ILI) activity was low in the United States

- **Viral Surveillance:** The most frequently identified influenza virus type reported by public health laboratories during week 43 was influenza A. The percentage of respiratory specimens testing positive for influenza in clinical laboratories is low.
- **Influenza-Associated Pediatric Deaths:** One influenza-associated pediatric death was reported that occurred during the 2016-2017 season.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Guam and four states was reported as regional; Puerto Rico and 12 states reported local activity; the District of Columbia and 31 states reported sporadic activity; one state reported no activity; and the U.S. Virgin Islands and two states did not report.

### 2017-18 Influenza Season Week 43 ending Oct 28, 2017

\*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

\*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.

\*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

\*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

\*For the data download you can use Activity Level for the number and Activity Level Label for the text description.
