---

## What is Influenza?

The Centers for Disease Control and Prevention (CDC) defines influenza (flu) as a contagious respiratory illness caused by influenza viruses. It can cause mild to severe illness. Serious outcomes of flu infection can result in hospitalization or death. Some people, such as older people, young children, and people with certain health conditions, are at high risk for serious flu complications. The best way to prevent the flu is by getting vaccinated against the flu, each year.

## Weekly Summary

Geographic Area	Flu/Influenza-Like Illness (ILI) Activity
<b>Lake County</b>	<ul style="list-style-type: none"> <li>Visits for Upper Respiratory Illness/Influenza-like-illness (ILI) at LCHD Health Centers show a 20% increase when compared to week 46, (week 47 is not comparable due to the Thanksgiving holiday).</li> <li>Lake County Schools: Absenteeism rose by 6.5%, however, total reporting schools increased by 11.</li> </ul>
<b>Cook County</b>	Flu/ILI Activity is currently: <b>LOW (Week 47).</b>
<b>Wisconsin (Southeast Region)</b>	Flu/ILI Activity is currently: <b>LOW (Week 46).</b>
<b>Illinois</b>	Flu/ILI Activity is currently <b>LOW (Week 47).</b>
<b>United States</b>	Flu/ILI Activity is currently: <b>LOW (Week 47).</b> Based on ILINet and most states falling into this category.

*Note: Our report contains different flu weeks for some geographic areas due to different reporting dates of sources.*

---

*For the 2017-18 flu season, The U.S. 3 component (Trivalent) vaccine contains: A/Michigan/45/2015 (H1N1) pdm09-like virus, A/Hong Kong/4801/2014 (H3N2)-like virus, and a B/Brisbane/60/2008-like virus (Victoria lineage). The 4 component (Quadrivalent) influenza vaccine will also include a B/Phuket/3073/2013- like virus (B/Yamagata lineage) for this year's flu season.*

---

The Centers for Disease Control and Surveillance (CDC) have classified flu/Influenza-Like-Illness (ILI) activity levels as minimal (levels 1-3), **Low (levels 4-5)**, **Moderate (levels 6-7)**, and **High (levels 8-10)**. This classification helps in summarizing weekly flu/ILI surveillance information for a geographic area and making flu/ILI activity easier to interpret.

## County Data

### LCHD/CHC (Federally Qualified Health Center): [Week 48 \(26 Nov – 2 Dec 17\)](#)

Visits to the Lake County Health Departments Community Health Center clinics (LCHD/CHC), for both upper respiratory infections (URI), and/or influenza-like-illness (ILI), increased by 20% when compared to week 46. Week 47 was not comparable due to the observance of Thanksgiving.

### Reportable to the Lake County Health Department: [Week 48 \(26 Nov – 2 Dec 17\)](#)

Quick Stats	Week 48	Prior Week	Cumulative*
<b>Flu - Intensive care unit (ICU) admissions</b>	<b>1</b>	0	<b>2</b>
<b>Flu - Pediatric Deaths (0-18)</b>	<b>0</b>	0	<b>1</b>
<b>Flu/ILI - Outbreaks (Congregate settings) **</b>	<b>2</b>	0	<b>2</b>

Source: Illinois' National Electronic Disease Surveillance System (I-NEDSS)

\*Cumulative since week 35. Single positive flu tests are not reportable in Illinois.

\*\*Correctional, Long Term Care (LTC) Facilities, group homes and Hospitals.

**School Influenza-Like Activity Surveillance: [Week 48 \(26 Nov - 2 Dec 17\)](#)**

Reporting School Districts: Antioch (34), Barrington (220), Community (128), Libertyville (70), North Chicago (112), Waukegan (60) and Zion (6).

Quick Stats	Current Week	Previous Week
Schools tracking and reporting absenteeism data	56	0
Schools reporting ILI absenteeism ( $\geq 5\%$ )	0	0
Schools/Pre-schools reporting general absenteeism ( $\geq 10\%$ )	17	0

**\*Average % Absenteeism and Influenza-like-Illness (ILI)  
Lake County Schools (2017-18)**

Source: Lake County Schools 2017-2018

Week 47: Thanksgiving Holiday - no data tracked by districts.

**Sentinel Pharmacies: Past 15 months (3 Sep 16 – 2 Dec 17)**

There are 71 pharmacies in Lake County who report the sales amount of over-the-counter (OTC) cough and cold medications for Upper Respiratory Infections. This report includes “All Sales” which refers to all cough and cold medicines that were sold in total, as well as “Un-promoted Sales”, which are cough and cold medicines not promoted but sold.

## State Data

**Illinois: Week 47 (19 – 25 Nov 17)**

Current Week Quick Stats		
Illinois Influenza Geographical Spread	<b>Local</b> (see flu activity chart below for definition)	
Percent of outpatient visits for ILI	1.56% ( <b>baseline: 1.80%</b> )	
Percent of Influenza Positive Tests	Current Week: 5.7%	Season: 2.4%
Influenza-Associated ICU Admissions	Current Week: 8	Season: 27
Influenza Outbreaks	Current Week: 1	Season: 4
Influenza Associated Pediatric Deaths (Season Total)	1	

Source: Illinois Department of Public Health, Influenza Surveillance, 2017-2018.

### Illinois Department of Public Health (IDPH) Flu Activity Rating by Geographical Spread

<b>No Activity</b>	No laboratory confirmed cases of influenza.
<b>Sporadic Activity</b>	Isolated lab-confirmed cases <u>OR</u> lab confirmed outbreak in one institution.
<b>Local Activity</b>	Recent (within the past 3 weeks) lab evidence of influenza in region with increased ILI <u>OR</u> recent (within the past 3 weeks) lab evidence of influenza in region with the outbreaks; virus activity is no greater than sporadic in other regions.
<b>Regional Activity</b>	Increased ILI in > 2 but less than half of the regions <u>AND</u> recent (within the past 3 weeks) lab confirmed influenza in affected regions. <u>OR</u> institutional outbreaks (ILI or lab confirmed) in > 2 and less than half or regions <u>AND</u> recent lab confirmed influenza in affected regions. A region is defined as the regions States use for public health purposes.
<b>Widespread Activity</b>	Increased ILI and/or institutional outbreaks (ILI or lab confirmed) in at least half of the regions <u>AND</u> recent (within the past weeks) lab confirmed influenza in the state.

## National Data

Center for Disease Control and Prevention (CDC): [Week 47 \(19 – 25 Nov 17\)](#)

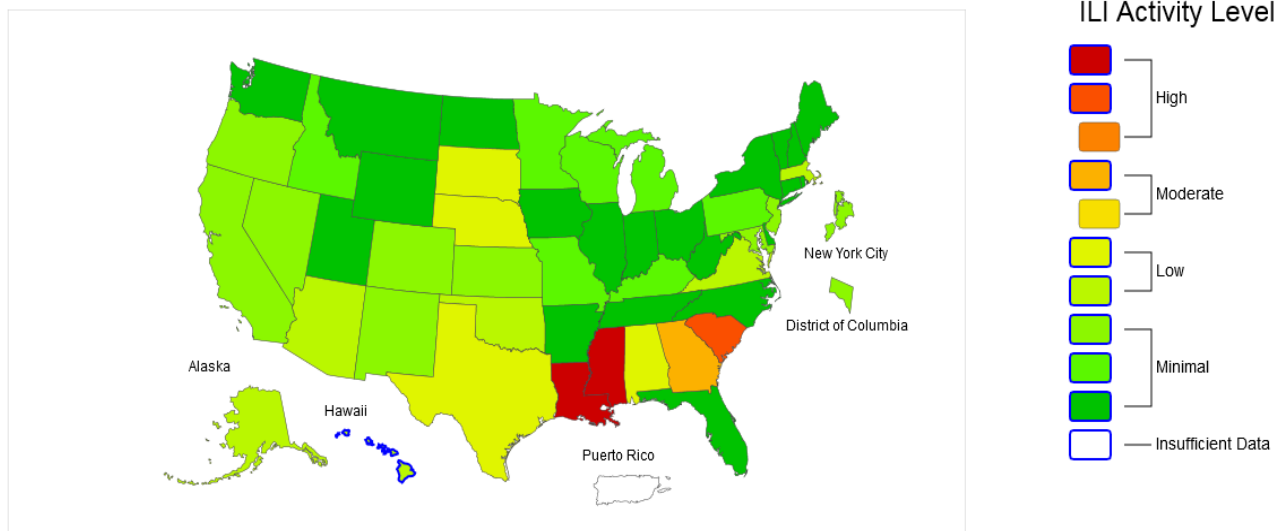

Flu/Influenza-Like Illness (ILI) activity increased in the United States

- **Viral Surveillance:** The most frequently identified influenza virus type reported by public health laboratories during week 47 was influenza A. The percentage of respiratory specimens testing positive for influenza in clinical laboratories is increasing.
- **Influenza-Associated Pediatric Deaths:** No influenza-associated pediatric deaths were reported.
- **Geographic Spread of Influenza:** The geographic spread of influenza in four states was reported as widespread; Guam and 10 states reported regional activity; Puerto Rico and 24 states reported local activity; and the District of Columbia, the U.S. Virgin Islands and 12 states reported sporadic activity.

**FLUVIEW** A Weekly Influenza Surveillance Report Prepared by the Influenza Division  
Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet

2017-18 Influenza Season Week 47 ending Nov 25, 2017

\*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

\*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.

\*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

\*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

\*For the data download you can use Activity Level for the number and Activity Level Label for the text description.
