Subject: R2 on April 28 -- recommend invalidation

Hi Larry,

This is to inform you that we have identified one additional canister from Lake County's Phase 3 EtO monitoring that had a final laboratory pressure reading of zero—the measurement at site R2 on April 28, 2020. As with the other final laboratory pressure readings of zero noted in my letter of October 6, 2020, we recommend invalidating this sample. Our apologies for failing to notice this in our original analysis of the data.

John Aldrin pointed out this oversight in an email to me. We will acknowledge the mistake to him after hearing confirmation from you that you received this message.

Please let me know if you have any other questions. Thanks!

Katie Siegel, Chief
Air Toxics and Assessment Branch
Air and Radiation Division
