

Sneeze Guard Setup Guide.

Each sneeze guard includes 2 legs and 1 sneeze guard shield. The actual shape of the legs and the cut-out configuration may appear different than pictured. Sneeze guards should be clear when set up is complete. If your sneeze guard is white or brown please remove and discard the covering used to ship the pieces to the polling site.

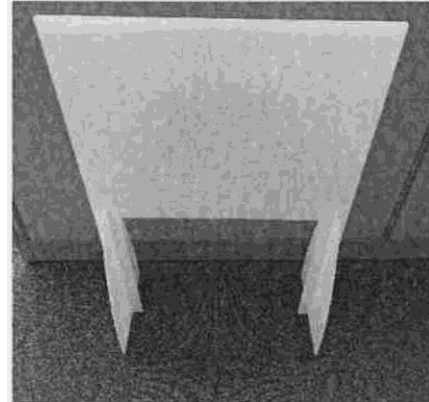

When removing the covering please use caution and refrain from using sharp items which could scratch the shielding.

Step 1 Carefully place leg in slot while sneeze guard shielding is lying flat on a table or on the ground.

Step 2 Once you have a proper alignment be sure to push the legs all the way up until the leg sits flush with the bottom of the sneeze guard shielding.

Step 3 Place second leg into slot following steps 1 & 2.

Step 4 Once complete with the help of a second person stand up the completed assembled sneeze guard and place over the middle of the E Poll Book or in front of the Ballot Transfer Cases which have been set up with the dividers inside.
