

Instructions for Soil Evaluations

1. All test holes for **NEW CONSTRUCTION** must be dug with a backhoe, by appointment **ONLY**. Please indicate excavator's name and phone number on the application.
2. Test holes for **REPAIRS and PROPERTY ALTERATIONS** should be dug with a backhoe when site conditions permit. This is the preferred method and may be required, depending upon the site. If site conditions absolutely do not permit the use of a backhoe, test holes may be dug by hand using a post-hole digger or auger. Hand-dug holes must be a minimum of 8 inches wide and 5 feet deep. All hand-dug holes should be covered to prevent freezing and/or accidents.
